

10. (Amended) An electrified lubricant for die lubrication, comprising:

Σ₂
a mixed powder of at least two different lubricants, each having a melting point higher than about 45°C, wherein the lubricant for die lubrication adheres to the surface of a die when electrified.

11. (Amended) An electrified lubricant for die lubrication, comprising:

a mixed powder of at least two different lubricants, each having a melting point higher than about 70°C, wherein the lubricant for die lubrication adheres to the surface of a die when electrified.

12. (Amended) An electrified lubricant for die lubrication, comprising:

a mixed powder of at least two different lubricants, each having a melting point higher than about 80°C, wherein the lubricant for die lubrication adheres to the surface of a die when electrified.

13. (Amended) An electrified lubricant for die lubrication, comprising:

a mixed powder of at least two different lubricants, each having a melting point higher than about 130°C, wherein the lubricant for die lubrication adheres to the surface of a die when electrified.

- Σ₃
25. (Amended) An electrified lubricant for die lubrication, comprising:

a mixed powder of at least two different lubricants, each having a melting point higher than about 150°C, wherein the lubricant for die lubrication adheres to the surface of a die when electrified.

26. (Amended) An electrified lubricant for die lubrication, comprising:

a mixed powder of at least two different lubricants, each having a melting point higher than 200°C, wherein the lubricant for die lubrication adheres to the surface of a die when electrified.
